

This congress has three main objectives, which will be explored in detail for each treated disease:

a) To present the most relevant emerging therapeutic innovations that are likely to change the medical approach in the near future, highlighting the results of the most important trials recently published or presented at major meetings

b) To report the actively - enrolling clinical trials for referring our patients, with a special focus on Italian active Institutes

c) To present the open-access programs active in Italy and the practical modalities for submitting requests.
